

David Kalandadze

Go Backend Engineer · Applied AI / LLM Systems

Dublin, Ireland · Open to remote · apala4igm@gmail.com · Telegram: @apala4i · apala4i.github.io

PROFESSIONAL SUMMARY

Go engineer building microservices for high-load marketplace platforms (Avito, Wildberries) and production LLM features on top of them: RAG pipelines, call summarization, ML-based quality assessment. Focused on performance optimization, reliable delivery and systems that stay correct under real traffic. Currently completing an M.Sc. in Computing at Atlantic Technological University, Ireland.

SKILLS

Languages: Go, Java, SQL

Data & Messaging: PostgreSQL, MySQL, Redis, Apache Kafka, NATS, AWS S3

AI / LLM: RAG, LLM integration, LangChain, EINO, ML model integration

Infrastructure & Observability: Docker, Kubernetes, Linux, Grafana, Sentry, Jaeger, Elastic Stack

EXPERIENCE

Golang Developer — Avito

Dec 2023 – Present

Go, PostgreSQL, Kafka, Redis

Developed and maintained microservices for an operational CRM sales platform handling critical business processes. Led code reviews, task decomposition and feature ownership across teams. Mentored engineers and conducted technical interviews.

- Optimized SQL query performance via Lateral Join — **5x faster processing**, reduced database load
- Integrated an ML-based call quality assessment system — **cut manual review time by 60%**
- Implemented an AI-powered call summarization pipeline using LangChain/EINO
- Built a RAG-based Q&A bot for knowledge retrieval across internal documentation
- Developed an automated GDPR compliance checker using static analysis tooling

Golang Developer — Wildberries

Mar 2023 – Dec 2023

Go, PostgreSQL, NATS, MySQL

Microservices for warehouse management (WMS) and logistics at Russia's largest marketplace. Led a team of 2 on a turnstile access control system for distribution centers. Key maintainer across multiple projects; conducted backend technical interviews.

- Architected a barcode storage algorithm with CRC5 validation, resolving critical pool capacity limits — **adopted company-wide**
- Achieved a **2x performance improvement** of the Outbox pattern via distributed locking and horizontal scaling
- Built an offline-capable employee data synchronization system for turnstile infrastructure
- Designed a secure encryption service for confidential HR data

Golang / Java Developer — CROC

Feb 2022 – Mar 2023

Go, Java, AWS S3, PostgreSQL

Participated in a strategic monolith-to-microservices migration, including a business logic rewrite from Java to Go. Built a geospatial data processing service handling terabyte-scale upload and export.

- Architected a high-performance parallel file upload system using low-level AWS S3 APIs — **4x upload throughput**
- Migrated critical business logic from a Java monolith to a Go microservice
- Optimized geospatial data processing — **1.5x faster export**

EDUCATION

M.Sc. Computing — Atlantic Technological University (ATU), Ireland

Jan 2026 – Jan 2027

B.Sc. Software Engineering — Bauman Moscow State Technical University (BMSTU)

2020 – 2025
